

MEEC - ASIInt
Laboratory 7
22-23 November 2016

Continue the work of last week adding the following functionalities:

- implement the update functionality
 - when the user see the book information, he can edit the data and click on the update button
When the user clicks the update button, a representation of the book is sent to the server: PUT method on the /data/books/<id>
- implement the **likes** functionality
 - Each user has a counter that represents the likes the book has received.
 - When presenting a book on a html page that value should be presented.
 - The URL /data/books/<id>/likes corresponds the that value
the GET method returns the number of likes
The POST method increases the number of likes by on
- The book page is updated every 5 seconds
 - Each update only retrieves the number of likes and changes the presented value to the new one
